### **Date fruit**

Date fruits are considered natural sugar with high calories, date calories vary depending on the type. Each 100 grams of date fruit contains 282 calories, while 100 grams of dried date fruit contains 319 calories. The average calory of a fresh date fruit is about 23 units. Neel date fruits are of high quality and are produced in different types.

### **Types of dates fruit**

**Barhi date fruit :** This date is one of the best and most nutritious dates because it has a lot of energy supply and its amount of minerals and iron is high. These dates fruit are yellow and brownish. They have an oval shape and its texture is soft and their skin is thick. Dates fruit give the taste of caramel and brown sugar and have a sweet taste.

**Khassui date fruits :** Khassui date fruits are one of the sweetest date fruits that are very round. Their size is between 1.5 to 2 cm and the weight of each plum is 3 to 5 grams. They are red in color and have a very high storage capacity.

**Asali (honey) date fruit :** Asali date fruits, also known as yellow date fruit, have a light brown color and a pleasant taste. It dissolves easily in the mouth. This type of date has a thin skin; the date fruit and shells are easily separated from the date fruit flesh.

**Kaloote date fruit :** These are large date fruits and are considered as wet-natured dates that have a balanced syrup. The size of this type of date fruit varies from 2 to 4 cm. It has a soft and crunchy texture and the energizing properties of this date fruit have made it known as a nutritious snack.

**Rabbi date fruit :** These date fruits are fleshy with a long and slender appearance. They are black or dark brown in color with a lot of syrup. Rabbi date fruits are easy to store due to their semi-dry condition and are stored at a cool temperature.

**Halilah date fruit :** Halilah date fruits are one of the newest types of date fruits. The bright yellow color of Halilah date fruit and its roundness are the most important characteristics of this delicious date fruit. The delicious taste as well as its shape has made it very popular among customers.

**Zahidi (Zahedi) date fruit :** Zahidi date fruits are considered as dry-natured date fruit. Zahidi date fruits are very low in calories with fructose sugar, which not only lowers blood sugar but also affects weight loss. Zahedi date fruits do not need to be refrigerated for storage.

**Shahani date fruit :** These date fruits are long with a narrow tip; they are very sweet and have a high nutritional value. This type of date fruit does not have high cholesterol and regulates cholesterol in the blood.

**Deglet Noor date fruit :** It is one of the best types of date fruits that is very popular. In addition to its unique taste, this type of date has a very high quality in appearance with a golden color.

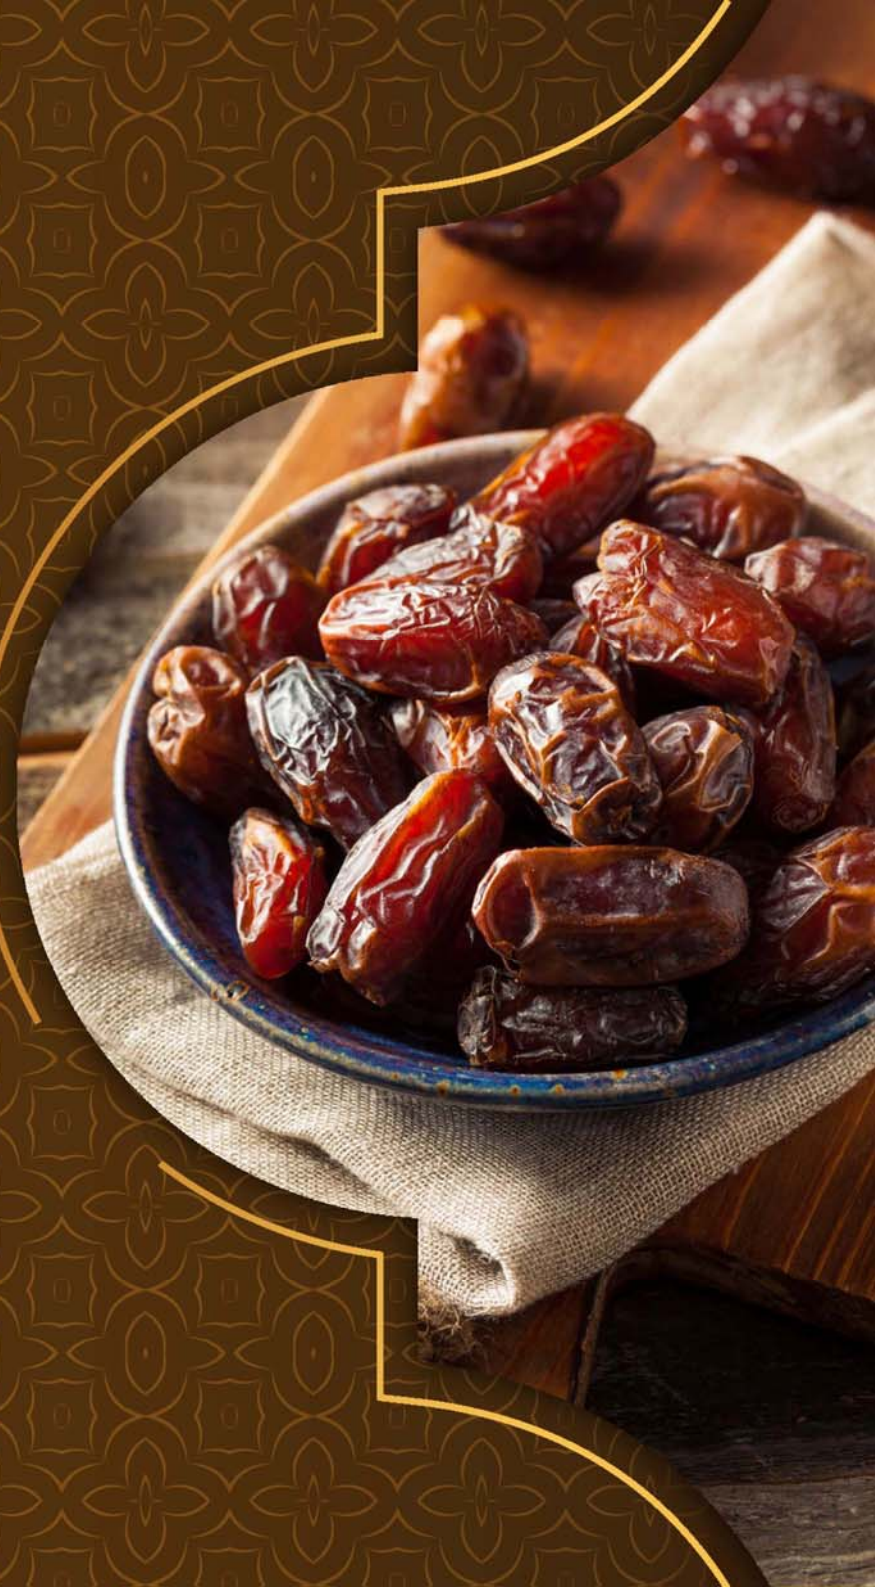

**Kabkaab date fruit :** This type of date fruit is oval and is considered as a semi-dry or wet date fruit. Its skin is attached to the flesh of the date and it's not very sweet. This product is stored at a temperature of 15 to 20 ° C. These date fruits are a great source of iron and minerals that are good for the body.

**Mazafati date fruit :** Mazafati date fruit has a wonderful flesh, nectar and taste and its color generally tends to dark purple and black.

**Piarom date fruit :** This type of date fruit is one of the best and most popular date fruits and is a semi-dry natured date fruit. Piarom date fruits are rich in sugar, proteins and other minerals and have a high nutritional value. The main characteristics of Piarom date fruit are thin and wrinkled skin, low moisture and dark brown skin.
